

# ***Fixed CCD BarCode Scanner***

## **Model 1045**

**1045**

The 1045 fixed CCD scanner provides accurate reading performance and works exceptionally well with high density and low-resolution barcode labels alike. It can read and decode twenty one of the most common barcode symbologies. With its Data Editing feature the ability and flexibility to interface into many applications is easy. The compact size of the 1045 makes it ideal for applications where space is limited.

The 1045 Fixed CCD Barcode Scanner inherits the design features of the 1067 and 1090 handheld models, including low power consumption and exceptional decoding technology. Its detachable cable can be mated to different interfaces such as Keyboard Wedge, USB and RS232.

See the back of this document for a full specification

Prices are as follows:

- Keyboard Version: £225 + VAT
- Serial Port Version: £225 + VAT (requires Power Supply at £10 or keyboard cable at £7 – specify if PC-AT or PS/2 connector)
